Claims:-

1. A butter measure kitchen utensil comprising a single rigid member, a scale having delineated graduation marks corresponding to fractional parts of a block of butter, substantially as set forth.
2. A lard or butter measure kitchen utensil comprising a rigid member, a handle for holding same, an aperture in handle for hanging said measure, a scale having delineated thereon graduation marks corresponding to fractional parts of a one pound block, and to the equivalent volume of one or more tablespoons full, substantially as set forth.
3. A lard or butter measure kitchen utensil, comprising a rigid member, a handle, an aperture in said handle, a scale on both sides of said rigid member having delineated on one side thereof graduation marks corresponding to fractional parts of a one pound block of butter and to the equivalent volume of one or more tablespoons full, and on the reverse side graduations designating volumes equivalent to one or more cups full and fractional parts thereof, substantially as set forth.
